Section II. Amendments to the Claims

Please amend claims 1-27 as set out below in the following listing of claims 1-27 of the application:

- 1. (Currently amended) <u>A system System</u> for establishing a connection between a contact requester and a <u>plurality of communications eentre centers</u> comprising:
- [[-]] a message receiver for accepting a message and a contact number;
- [[-]] a parser for parsing the message and identifying one or more identifiers in the message, including a destination identifier; and
- [[-]] a connector which uses the destination identifier and the contact number to establish a connection between a requested one of [[a]] the plurality of communications eentres centers and the contact requester.
- 2. (Currently amended) The system according to claim 1, further comprising:
- a look-up table having a list of communications eentres centers and a correlated list of destination identifiers,
- whereby the connector uses the look-up table to establish the requested one of the plurality of communications centres centers from the destination identifier.
- 3. (Currently amended) The system according to one of claims 1 or 2 claim 1, further comprising: a request querer for queueing in a queue requests to establish the connection between the contact requester and the requested ones of the plurality of communications centres centers.
- 4. (Currently amended) The system according to one or more of the above claims claim 1, wherein the connector first establishes a communications eentre center connection between the connector and the requested one of the plurality of communications eentres centers and subsequently establishes a contact requester connection between the connector and the contact requester, thereby establishing the connection between the requested one of the plurality of communications eentres centers and the contact requester.
- 5. (Currently amended) The system according to any one of the above claims claim 1, wherein the connector establishes a telephone connection between the contact requester and a staff member at the requested one of the plurality of communications centres centers.

- 6. (Currently amended) The system according to any one of the above claims claim 1, wherein the connector passes to the requested one of the plurality of communications eentres centers at least one of the one or more identifiers.
- 7. (Currently amended) The system according to any one of the above claims claim 1, wherein the connector passes to the requested one of the plurality of communications eentres centers at least the contact number.
- 8. (Currently amended) The system according to any one of the above claims claim 1, wherein the message is in either a text format, an audio format or an image format.
- 9. (Currently amended) The system according to any of the above claims claim 4, further including at least one timer for timing the length of time required to establish the communications centre center connection.
- 10.(Currently amended) The system according to any one of claims 3 to 10 claim 4, wherein the request queuer places the request at the bottom of the queue if <u>a</u> the contact requester connection between the connector and the contact requester cannot be established.
- 11. (Currently amended) The system according to any one of the above claims claim 3 further including a list of staff members at the plurality of communications centres centers to whom the requests may currently be sent.
- 12. (Currently amended) A communications eentre center for use in the system of claims 1 to 11, the communications centre comprising:
- [[-]] a message receiver for accepting a message and a contact number;
- [[-]] a parser for parsing the message and identifying one or more identifiers in the message, including a destination identifier;
- [[-]] a connector which uses the destination identifier and the contact number to establish a communications center connection between the communications center and the contact requester;
- [[-]] a plurality of work stations for use by staff members; and
- [[-]] a connection acceptor for accepting a communications eentre center connection and for passing the request to one of the plurality of work stations.

- 13. (Currently amended) The communications eentre center of claim 12, further comprising a customer relationship manager accessible by the staff members.
- 14. (Currently amended) The communications eentre center of claim 13, wherein the connection acceptor further receives the contact number of the contact requester and accesses data in the customer relationship manager by means of the contact number.
- 15. (Currently amended) The communications eentre center of one of claims 12 to 14 claim 12, further including an on-line indicator to indicate which one of the plurality of work stations are in use.
- 16. (Currently amended) The communications eentre center of one of claims 12 to 14 claim 12, further including an IVR system to enable the staff member to indicate that the work station is in use.
- 17. (Currently amended) A method of requesting the establishment of a connection between a contact requester and a communications eentre center comprising:
- [[-]] a step of sending to a central unit a message and a contact number, the message having one or more identifiers, including a destination identifier, the destination identifier establishing the identity of one of the plurality of communications eentres;
- [[-]] a step of parsing the message at the central unit to determine the destination identifier;
- [[-]] a step of establishing the connection between the contact requester and the requested one of the plurality of communications eentres centers.
- 18. (Currently amended) The method according to claim 17, further including the step of passing the contact numbers to the requested one of the plurality of communications eentres centers.
- 19. (Currently amended) The method according to one of claims 17 or 18 claim 17, further including the step of passing further ones of the one or more identifiers to the requested one of the plurality of communications centres centers.

- 20. (Currently amended) The method according to any one of claims 17 to 19 claim 17, further comprising the step of rescheduling the time for establishing a connection in the event that the connection is not established within a first time frame.
- 21. (Currently amended) The method according to any one of claims 16 to 19 claim 17, further comprising the step of cancelling a request for connection if the connection is not established within a second time frame.
- 22. (Currently amended) Communications Device A communications device for sending a message to the system of one of claims 1 to 11 claim 1 comprising:
- [[-]] a display device for displaying a graphical user interface;
- [[-]] a first memory for storing a plurality of icons for display on said graphical user interface; and
- [[-]] a second memory for storing a plurality of destination numbers associated with one or more of the plurality of icons.
- 23. (Currently amended) The communications device of claim 22 further comprising
- [[-]] a third memory for storing a plurality of reference numbers associated with one or more of the plurality of destination numbers.
- 24. (Currently amended) The communications device of one of claims 22 or 23 claim 22 further comprising a update receiver for receiving at least one of the plurality of icons, the plurality of destination numbers and/or the plurality of reference numbers.
- 25. (Currently amended) The communications device of one of claims 22 to 24 claim 22 further comprising selection means for selecting one of the plurality of icons and thereby sending to the system a message.
- 26. (Currently amended) The communications device of one of claims 22 to 25 claim 22, wherein the second memory stores at least one single destination number for establishing contact with the plurality of communications centres centers.
- 27. (Currently amended) The communications device of one of claims 22 to 25 claim 22, wherein the second memory stores at least a stored number allowing establishment contact with a subscriber through the system.
